Author

EasyOS Repair Center is an independent community project created by **pp4mnk**. The objective is to simplify maintenance, diagnostics and repair tasks in EasyOS using lightweight shell scripts fully aligned with the EasyOS philosophy.

What is it?

A central hub that groups common repair and maintenance tasks into one application. Instead of remembering many commands, users can access repairs from a single interface.

Who is it for?

Beginners who need one-click repairs, experienced users wanting quick diagnostics, testers and developers looking for a central maintenance tool.

Installation

Extract the package, run `install.sh` and launch it from Menu → System → EasyOS Repair Center or by executing **easyos-repair-center**.

Main Features

Browser repair, desktop repair, menus, icons, GTK themes, fonts, network, DNS, DHCP, storage, permissions, caches, RAM, audio, boot, filesystem checks, reports and diagnostics.

FAQ - Beginners

Q: Will it damage my system?

A: No. Repairs are designed to be safe.

Q: Do I need Linux knowledge?

A: No, most tools are one click.

Q: Can I use it regularly?

A: Yes, especially diagnostics and cleanup.

FAQ - Advanced Users

Q: Can I extend it?

A: Yes. It is shell based and modular.

Q: Does it replace terminal tools?

A: No. It complements them.

Q: Can new repair modules be added?

A: Yes, new scripts can easily be integrated.

Roadmap

Future versions may include automatic problem detection, SMART analysis, snapshot integration, container diagnostics, benchmark comparison, package verification, AI-assisted troubleshooting and one-click repair recommendations.
